Bloodborne, developed by Sony Japan Studio, is the next evolution of the Souls series. Set in a mysterious city called Yharnam, the player takes control of a hunter known only as the player character. In Yharnam, the transition from the living to the dead has begun, and a series of inexplicable events have begun to occur. The deceased are called Souls, and the player has the mission of hunting them down and bringing them to the afterworld. The game is heavy on action. The Souls series is known for its tight controls, hard difficulty, and slow weapon upgrade. For Bloodborne, we added two new things to the combat system: dodging and blocking. Dodging will help you to escape attacks that could otherwise end your life, and blocking will help you to avoid several attacks at once. In addition to that, the upgrade system has been redesigned, and the weapons as well as the armor and equipment have been improved. For example, weapons now have an overclock system that can use up to 10 different types of ammunition. Players can choose the most suitable ammo based on the current situation. The rest is up to the player's experience points. We're also implementing several features to immerse the player even further. For example, the clothing system that we added in Demon's Souls has been improved. You'll also get the sense of being immersed in the game as blood splatters on the floor. It's the Bloodborne. - Combat You play as a Hunter, who takes part in a series of battles with Souls. Players will need to equip special armor and weapons with their maximum attack power to defeat Souls. Players will need to choose between two forms: a primary and a secondary weapon. Some weapons can be switched easily, but others are locked to a certain form. The difference in weapon power depends on the element that you use it. Some weapons can be upgraded with blood consumable items. Blood consumables are used for upgrading weapons. Some weapons have abilities that will only be activated when upgraded. The abilities fall into three categories: basic attacks, defensive skills, and mobility skills. Basic attacks: These skills are used to deal maximum damage to the current Soul. Defensive skills: These skills are activated when the player is attacked. Mobility skills: These skills are activated when the player tries to use "overclock" skills to counterattack while evading.
