
Next year we'll be 'Frozen Manatee'
 Then 'Go Away Sandy' Then 'Black
 Friday' with a 'Black Friday' sale Then
 'All Your Money is Gone' Then 'Santa
 Claws'... this year we'll be 'Last year'
 Then 'A Very Merry Christmas' We're
 feeling good about it all, and I'll be
 sure to let you know when we're up
 and running again in 2015. That's all
 for now... happy holidays and good
 luck with your 2014!

are invariant
 under the geometrical rescaling $s \rightarrow s/\epsilon^2$, $r \rightarrow r/\epsilon^3$.

Assuming that the brane is located at
 the origin, we may rescale the brane to
 the Planck brane by imposing
 $s=r=\epsilon=1/\sqrt{M_p}$ and
 taking the limit $\epsilon \rightarrow 0$. Then
 the first and second terms in
 Eq. ([eq:bulk-action]) give
 contribution to the boundary action

density. The third term gives in the present case the negative contribution, $-\frac{1}{48} \epsilon^3 \ln \epsilon$ to the boundary action density. Here we should note that the negative contribution was not guaranteed, since there may be also a contribution from the boundary curvature. However, in the present case such a contribution is identically zero due to the vanishing of the Weyl tensor of the boundary metric. So far we have restricted ourselves to the boundary term of the gravitational action. It is also possible to consider the boundary term of the gauge action. The gauge coupling of
