remove all trace's of Adobe's Shockwave Player from your computer, including associated files, folders and registry entries. Remove all files, folders and registry entries associated with Adobe Shockwave Player This lightweight utility is officially released by Adobe to come to the aid of users experiencing stability issues with Shockwave Player, in order to fully eliminate it from the system before attempting a fresh reinstall. Evidently, it can also be used if you only want to get rid of it. Besides the fact that the downloaded setup file comes in a

tiny package, it doesn't actually install anything. Running the setup file deploys a wizard that autodetects your Adobe Shockwave Player installation and associated files, offering to delete everything with the click of a button. Close web browsers and create a system restore point. Aside from confirming this action, there's no other intervention required on your behalf. However, Adobe shows a couple of warnings beforehand, advising you to exit any other applications (especially web browsers with Shockwave Player) since web browsers will be

auto-closed and you will lose any ongoing work. Furthermore, the tool doesn't create a system restore point before proceeding with the uninstaller, so it's best you do this yourself (even if it's not recommended by Adobe), just to be on the safe side if something goes wrong and you have to rollback changes. The uninstall job doesn't take long, after which you receive a notification message.

Fast and easy-to-use Adobe uninstaller The application worked smoothly in our tests and eliminated all traces of Shockwave Player. One minor setback we can

mention is that it doesn't explicitly mention which files, folders or registry entries it removes, in order to give you an overview of the whole task. Otherwise, Adobe Shockwave Player Uninstaller gets the job done. KIRSCHEN

We studied a number of 107 pulmonary tuberculosis patients with HIV infection who were treated between January 1993 and July 1994. The patients were divided into two groups: group A included patients with tuberculosis who were not infected

with HIV, and group B included patients with HIV infection. The length of the first treatment and of the subsequent follow-up was 8.9 +/- 1.3 months and 15.1 +/- 0.7 months in group A, and 8.3 +/- 1.8 months and 14.8 +/- 1.2 months in group B, respectively. Each patient was treated with 20 mg/kg isoniazid daily for 12 months, and after this period, for another 24 months with 60 mg/kg isoniazid, 2 mg/kg rifampicin, and 150 mg/kg pyrazinamide. We administered only 1 or 2 days a week of intermittent pyrazinamide treatment during the latter half of

the first treatment. Two patients of group A had recurrent pulmonary tuberculosis at 24 and 27 months after treatment, and both patients were treated successfully. In group B, all patients were cured.

Recurrence of tuberculosis was not observed in either group, and there was no particular difference in the length of hospitalization or the cost of treatment between the two groups. The mortality rate was 5.6% in group A and 2.3% in group B. Troponin I in the diagnosis of acute myocardial infarction. Serum levels of troponin I were measured in 66 patients with acute
